# SHIVANI AWASTHI

**AI Deployment & Solutions Engineer · Customer Onboarding · Human-in-the-Loop AI Workflows**

Uttar Pradesh, India (relocating to Bengaluru) · +91 7080176406 · awasthi28shivani@gmail.com · Portfolio · LinkedIn · github.com/shiivaniiawasthii

## SUMMARY

Customer-facing Solutions Engineer with 3+ years taking software from first discovery call to reliable production use across 30+ client accounts, including 8+ enterprise implementations for a Fortune 500 pharma-tech client. I start with the customer: gather inputs from their engineering, product and operations teams, map how the work actually gets done, and design the solution around it, deciding which steps AI can run on its own and where a human must approve. I agree success metrics with the customer up front and iterate until they are met. Resolved ~90% of production issues without engineering escalation. Build hands-on with AI daily (Claude Code, prompt engineering, RAG). Available to join immediately; comfortable with US hours.

## SKILLS

- **Deployment & success metrics:** discovery and requirements gathering, workflow mapping, human-in-the-loop design (AI vs. human approval points), success criteria and KPIs (task success rate, % handled without human, escalation rate, time to go-live, error rate), go-live readiness, post-launch monitoring
- **AI & agents:** Claude Code, agent instruction files (CLAUDE.md / AGENTS.md), prompt engineering, RAG (embeddings, FAISS vector search), LLM APIs (Gemini, OpenAI), Lovable, Figma Make
- **Debugging & integrations:** root-cause analysis, log and payload inspection, isolating product bug vs. customer setup vs. configuration, REST APIs, webhooks, IMAP email automation, cron jobs, JSON/XML schema validation, Postman, cURL
- **Engineering:** TypeScript, JavaScript, Node.js, Python (FastAPI), React, Next.js, PostgreSQL, Supabase, MongoDB, Git
- **Tools & communication:** Slack, Jira, Asana, Excel; customer communication across US, UK and India time zones

## EXPERIENCE

**CognifAI** — Solutions Engineer — Jun 2024 – Oct 2026 · Remote, India

*Clients: a Fortune 500 pharma-tech enterprise (pharmacovigilance), drug-safety reporting startups, a UK-based NPS platform*

- Owned 8+ enterprise implementations end to end, agreeing success criteria with each customer at kick-off (go-live date, data accuracy, issue response times) and tracking them to verified production launch. Primary technical contact for 30+ client accounts across US, UK and India hours.
- Ran discovery with customer engineering, product and operations teams; turned their workflows, data and edge cases into implementation checklists with named owners, so every solution was built around how the customer actually works.
- Resolved 300+ production issues (~4 a week), ~90% without engineering escalation, by isolating platform bug vs. customer setup vs. configuration vs. third-party incident; turned recurring root causes into troubleshooting playbooks.
- Owned E2B(R2) XML schema mapping and field-level validation for drug-safety reporting; traced delivery failures and rejected payloads to root cause.
- Designed the human-in-the-loop workflow for an AI document-translation product (medical and legal documents): defined where AI acts alone and where a reviewer must approve, plus user roles, AI confidence thresholds and audit logs; prototyped in Figma Make and Lovable and handed off to engineering.
- Ran 20+ tailored live demos and technical deep-dives that supported 12–13 client renewals; wrote the onboarding playbooks and API docs used by Support and Customer Success.
- Built WorkHiveAI, the team's internal project management tool (Kanban, sprints, AI email-to-task automation), used daily by 20 team members and replacing Asana.

**Procxl Private Limited (Carbonmint, agri-climate tech)** — Junior Software Engineer — Feb 2023 – Sept 2023 · Hyderabad, India

- Built and documented 20+ REST APIs (Node.js, Express); cut response time by 40%.
- Rolled out JWT authentication and role-based access for 300+ users across three permission levels; redesigned PostgreSQL and MongoDB schemas for 50% faster data retrieval.

**We Infinity Plus** — Web Developer Intern — Sept 2022 – Feb 2023 · Remote

- Built RESTful API routes for new product features and a consistent UI with Material UI; owned unit testing and debugging to catch regressions before release.

## AI PROJECTS

**Gym Manager (Messy2Easy)** — live · GitHub · Claude Code, React, TypeScript, Supabase · **Demo login** (sample data): phone 7080176406 · password sample123

- Gathered requirements from a real gym owner and replaced Google Forms, WhatsApp and a manually maintained Excel sheet with one system for 80 members: registration, ID verification, plans, payments, renewals, attendance and expenses. Live in 10 days, built by directing Claude Code (CLAUDE.md / AGENTS.md instruction files, output review, edge-case testing).
- Human-in-the-loop design: new registrations enter a pending queue automatically and are activated only after the owner verifies the Aadhaar, avoiding a paid verification tool while keeping a human check on identity.
- Removed the owner's manual profit/loss calculation: he now only records fee submissions and renewals, and gets a daily WhatsApp/email summary (collections, dues, expiring members, drop-offs) with retries, email fallback and duplicate prevention.
- Added an audit log of every staff and owner action, one-click Excel reports, and form validation with rate limiting, at near-zero running cost.

**Support Doc RAG Assistant** — live · Python, FastAPI, FAISS, Gemini/OpenAI

- Answers support questions only from uploaded documents, with source citations so every answer is verifiable; switches between Gemini and OpenAI with one config change.

## EDUCATION & CERTIFICATIONS

- **B.Sc. (Agriculture)**, Chandra Shekhar Azad University of Agriculture and Technology · 2017 – 2021 · AI For Everyone (DeepLearning.AI) · AWS Cloud Practitioner training
