SHIVANI AWASTHI

AI Deployment & Solutions Engineer · Customer Onboarding · AI Workflow Automation

Bengaluru, India · +91 7080176406 · awasthi28shivani@gmail.com · Portfolio · LinkedIn · github.com/shiivaniiawasthii

SUMMARY

Customer-facing engineer with 3+ years taking software from first discovery call to reliable production use across 30+ client accounts, including 8+ enterprise implementations (Oracle). I map how a customer's work actually gets done, turn it into a working system, and keep iterating until it runs without hand-holding. I resolve 75–80% of production issues without engineering escalation. I build with AI daily: shipped a live gym-operations platform with Claude Code (agent instruction files, AI-directed development) and a RAG support assistant. Background in agriculture, which helps me learn operational industries quickly. Based in Bengaluru; available to join immediately, full-time in person.

SKILLS

- **AI & agents:** Claude Code, agent instruction files (CLAUDE.md / AGENTS.md), prompt engineering, RAG (embeddings, FAISS vector search), LLM APIs (Gemini, OpenAI), AI-assisted development and debugging
- **Customer deployment:** discovery and kick-off calls, workflow and requirements mapping, integration checklists with named owners, go-live and production support, live demos, onboarding playbooks, troubleshooting runbooks
- **Debugging & quality:** root-cause analysis, log and payload inspection, reproducing issues in staging, isolating product bug vs. customer setup vs. configuration, verified fix closure
- **Integrations & automation:** REST APIs, webhooks and event pipelines, email automation (IMAP), cron jobs, WhatsApp and email notifications, JSON/XML schema validation, Postman, cURL
- **Engineering:** TypeScript, JavaScript, Node.js, Python (FastAPI), React, Next.js, PostgreSQL, Supabase, MongoDB, Prisma, Git, GitHub Actions, AWS
- **Tools & communication:** Slack, Jira, Asana, Excel; customer communication across US, UK and India time zones

EXPERIENCE

CognifAI — Solutions Engineer — Jun 2024 – Oct 2026 · Remote, India

Clients: Oracle (pharmacovigilance), drug-safety reporting startups, a UK-based NPS platform

- Owned 8+ enterprise implementations end to end, from discovery and solution design to go-live and production support. Primary technical contact for 30+ client accounts across US, UK and India hours.
- Ran discovery calls with customer engineering, product and operations teams; mapped their real workflows, data and user journeys into implementation checklists with named owners, tracked to verified production launch.
- Resolved 100+ production issues, 75–80% without escalation, by isolating platform bug vs. customer setup vs. configuration vs. third-party incident; turned each root cause into a reusable troubleshooting playbook.
- Owned E2B(R2) XML schema mapping and field-level validation for Oracle's drug-safety reporting; traced delivery failures and rejected payloads to root cause.
- Ran 20+ live demos and technical deep-dives that supported 12–13 client renewals; wrote the onboarding playbooks and API docs used by Support and Customer Success.
- Built WorkHiveAI, the team's internal project management tool (Kanban, sprint tracking, AI-powered email-to-task automation), used daily by 10+ team members and replacing Asana.

Procxl Private Limited (Carbonmint, agri-climate tech) — Junior Software Engineer — Feb 2023 – Sept 2023 · Hyderabad, India

- Built and documented 20+ REST APIs (Node.js, Express); cut response time by 40%.
- Rolled out JWT authentication and role-based access for 300+ users across three permission levels; redesigned PostgreSQL and MongoDB schemas for 50% faster data retrieval.

We Infinity Plus — Web Developer Intern — Sept 2022 – Feb 2023 · Remote

- Built RESTful API routes for new product features and a consistent UI with Material UI components and themes.
- Owned unit testing and debugging sessions to keep releases stable and catch regressions before users did.

AI PROJECTS

Gym Manager (Messy2Easy) — live · GitHub · Claude Code, React, TypeScript, Supabase · **Demo login** (sample data): phone 7080176406 · password sample123

- Replaced a real gym's Google Form, WhatsApp and paper tracking with one system for registration, ID verification, plans, payments, renewals, attendance and expenses.
- Gathered requirements from the gym owner, designed the workflow, and built it with Claude Code as the primary developer: wrote agent instruction files (CLAUDE.md / AGENTS.md), specified features, reviewed output, and tested edge cases.
- Automated a daily owner summary on WhatsApp and email (collections, expiring members, dues, drop-offs) with duplicate prevention, retries and email fallback.
- Added an audit log of every staff and owner action, one-click Excel reports, and a public registration form with validation and rate limiting, on near-zero running cost.

Support Doc RAG Assistant — live · Python, FastAPI, FAISS, Gemini/OpenAI

- Answers support questions only from uploaded documents, citing the source passage; provider-agnostic LLM layer (Gemini or OpenAI via one config change).

EDUCATION & CERTIFICATIONS

- **B.Sc. (Agriculture)**, Chandra Shekhar Azad University of Agriculture and Technology · 2017 – 2021
- AI For Everyone (DeepLearning.AI) · AWS Cloud Practitioner training · React & Node.js: The Complete Guide (Udemy)
